

Children and COVID-19: State Data Report

A joint report from the American Academy of Pediatrics and the Children's Hospital Association

Summary of publicly reported data from 49 states, NYC, DC, PR, and GU

Version: 9/24/20

COVID-19: Available Data for Children

- State-level reports are the best publicly available data on COVID-19 cases in children
- This report summarizes what was available on 9/24/20
- **49 states, NYC, DC, Puerto Rico and Guam** provided age distributions of reported COVID-19 cases
 - 11 states provided age distribution of testing
 - 25 states and NYC provided age distribution of hospitalizations
 - 42 states and NYC provided age distribution of deaths

Fig 1A: States Reporting Age Distribution of COVID-19 Cases as of 9/24/20

Reporting age distribution of COVID-19 cases:

- Yes: Reported age distribution of cases
- TX: Reported age distribution for only 7% of cases
- NY: Only NYC reported age distribution of cases
- MA: Only reported age distribution of cases added in past two weeks

See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU
Analysis by American Academy of Pediatrics and Children's Hospital Association
All data reported by state/local health departments are preliminary and subject to change

Children and COVID-19: Data Limitations

General Limitations

- Format, content, and metrics of reported COVID-19 data differed substantially by state
- Definition of “child”: Age ranges reported for children varied by state (0-14, 0-17, 0-18, 0-19, and 0-20 years; see Fig 1B)
- Unknown: Number of children infected but not tested and confirmed

State-Level Limitations

- NY: Did not provide age distribution for state-wide cases (NYC only)
- TX: Reported age distribution for only 7% of all cases and is excluded from some figures
- AL: As of 8/13, changed definition of child case from 0-24 to 0-17 years; as of 9/17, provided age distribution for confirmed cases only
- HI: As of 8/27, changed definition of child case from 0-19 to 0-17 years
- MA: As of 9/3: revised definition of probable case, leading to reduction in total case count; reported age distribution of cases added in last two weeks but not for total cases to date
- RI: As of 9/10, changed definition of child case from 0-19 to 0-18

Children and COVID-19: 9/24/20

Summary of State-Level Data Provided in this Report

Detail and links to state/local data sources provided in Appendix

Cumulative Number of Child COVID-19 Cases*

- 624,890 total child COVID-19 cases reported, and children represented 10.5% (624,890/5,965,268) of all cases
- Overall rate: 829 cases per 100,000 children in the population

Change in Child COVID-19 Cases, 9/10/20 – 9/24/20

- 75,458 new child cases reported from 9/10-9/24 (549,432 to 624,890), a 14% increase in child cases over 2 weeks

Testing (11 states reported)*

- Children made up between 4%-16.2% of total state tests, and between 3.7%-15.5% of children tested were tested positive

Hospitalizations (25 states and NYC reported)*

- Children were 0.5%-3.7% of total reported hospitalizations, and between 0.2%-7.9% of all child COVID-19 cases resulted in hospitalization

Mortality (42 states and NYC reported)*

- Children were 0%-0.26% of all COVID-19 deaths, and 17 states reported zero child deaths
- In states reporting, 0%-0.16% of all child COVID-19 cases resulted in death

* Note: Data represent cumulative counts since states began reporting; All data reported by state/local health departments are preliminary and subject to change
See detail in Appendix: Data from 49 states, NYC, DC, PR, and GU; Analysis by American Academy of Pediatrics and Children's Hospital Association

Fig 2. Cumulative Number of Child COVID-19 Cases: 9/24/20

- 624,890 total child COVID-19 cases (cumulative)
- Twenty-one states reported 10,000+ child cases
- Four states reported fewer than 1,000 child cases

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children's Hospital Association

Fig 3. Percent of Cumulative COVID-19 Cases that were Children: 9/24/20

- Children represented 10.5% (624,890/5,965,268) of all available cases
- Twenty-nine states reported 11% or more of cases were children
- NJ and NYC reported that 3.7% or less of cases were children

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)
All data reported by state/local health departments are preliminary and subject to change
Analysis by American Academy of Pediatrics and Children's Hospital Association

Fig 4. Cumulative COVID-19 Cases per 100,000 Children: 9/24/20

- Calculated using state-level population estimates from US Census Bureau (2019)*
- Overall rate: 829 child COVID-19 cases per 100,000 children in the population
- Fifteen states reported more than 1,000 cases per 100,000 children

See detail in Appendix: Data from 48 states, NYC, DC, PR, and GU (TX excluded from figure)

A. Cumulative Child COVID-19 Cases, 9/24/20

Eight states with 20,000+ cumulative child cases

B. Percent Increase in Child Cases, 9/10/20-9/24/20

From 9/10-9/24, there were 75,458 new child cases reported (549,432 to 624,890; 14% increase)

See detail in Appendix: Data from 47 states, NYC, DC, and PR (TX excluded from figures; AL excluded from Fig 5B due to recent changes in child case definition)
All data reported by state/local health departments are preliminary and subject to change; Analysis by American Academy of Pediatrics and Children's Hospital Association

As of 7/30, Texas provided age distribution for all COVID-19-associated deaths; Texas reported age for only 7% of total confirmed cases; Percent of child cases resulting in death omitted for Texas; data for Texas in this report is limited to the case count for which age is provided

Frequently Asked Questions

- Q: *Why are the AAP and CHA collecting this data?*
 - A: Our goal is to provide a weekly snapshot of how COVID-19 is affecting children in the United States. CDC provides a national number of cases by age on its [COVID-19 data tracker](#), but there are no geographic indicators provided and the age data is not released on a regular schedule. Our data collection method allows for tracking the number of child cases weekly, as well as providing publicly reported case numbers for children at the state level.
- Q: *The age ranges for children in the report are broad – why were these age ranges chosen and are data available for more specific age ranges of children?*
 - A: Each state makes different decisions about how to report the age distribution of COVID-19 cases, and as a result the age range for reported cases varies by state. For the purposes of this report it is not possible to standardize more detailed age ranges for children based on what is publicly available from the states at this time. Please refer to specific state health department websites of interest to see if the state provides more granular detail of cases by age (see report Appendix for links to all state data sources).
- Q: *What is the definition of a COVID-19 case?*
 - A: COVID-19 cases are defined as persons who have been identified as a confirmed (via a diagnostic molecular test) or probable (via a clinical diagnosis) case. COVID-19 cases are reported by the states, [following reporting standards established by the CDC](#). For more information on the definitions of confirmed and probable cases, see the following resources: [Covid Tracking Project: Definitions](#); [CDC, COVID-19 Data and Surveillance](#).
- Q: *Why does the report not provide the percent of child cases that were symptomatic vs. asymptomatic or that had underlying conditions?*
 - A: For the report, we are limited to the data that states are making publicly available. At this time, states are not providing data related to symptoms or underlying conditions and age. CDC provides some information on COVID-19 hospitalizations by age on the [CDC COVID-NET dashboard](#).
- Q: *For the child population for each state, does that match the listed age range for the state's child COVID-19 data?*
 - A: Yes, the report uses child population numbers that match on directly with the listed age range for children provided by each state. State population numbers were obtained from the [US Census Bureau](#).
- Q: *The report provides “cumulative totals” for cases, tests, hospitalizations, and deaths for available states. Are those the total numbers since the states began reporting, or since the AAP and CHA started collecting this data?*
 - A: All “cumulative total” data represent cumulative counts since states began reporting COVID-19 data.
- Q: *How can I learn more about COVID-19 cases in my state?*
 - A: Links to all state data sources are provided in the Appendix.
- Q: *Are these data final?*
 - A: No. All data reported by state/local health departments included in this report are preliminary and subject to change and revision as health departments gather more information.
- Q: *Is this the most recent report available? When will a new report be released?*
 - A: The most recent version of the report is available for [download on the AAP website](#). New reports are made available for download on a weekly basis.
